(您會收到信是因為您是我們社群夥伴, 如您未來不想收到信, 請參考信尾說明)

*** The English version of the event recap is at the bottom of this email.**

感謝大家踴躍參加這次的小聚, 也謝謝四位分享者願意把自己的實作經驗帶到現場。

我們期待見到每位喜歡 AI, 並且正在生活或工作中實際運用它的夥伴

同時我們也持續在尋找未來場次的分享者。不論是正在進行的專案、踩過的坑, 或任何想跟大家聊聊的應用場景, 都非常歡迎與我們聯絡。

以下是這次四位講者的分享摘要, 也期待在下一場遇見更多新朋友!

- Hauke 浩克

跟大家介紹他如何用 AI 開發各種工具類的程式, 包含有 Freemium 的 Google Workspace Tools, 包含他有近 4 萬下載量的 Text to Table Converter。

除了 AI 之外, 浩客也分享了他在這種網路工具型的創業在市場與行銷上面的經驗。

底下是浩客分享給大家的工具:

Google Workspace Marketplace: https://workspace.google.com/marketplace/app/text_to_table_converter/388744518554

有關 Text to Table converter 的說明: <https://codoha.com/en/text-to-table/>

如果您也有想要快速在 Google Doc/Gmail 等要有個工具快速建立表格, 您可以試試浩客開發的工具, 也麻煩各位群友幫他留下 5 星好評❤️。

- Allian Kazi

分享了他在花蓮某大醫院所參與的計畫, 利用 AI 來優化的 SDM (Shared Decision Making, 指的是醫療中病人和醫護人員共同參與醫療決策過程並達成共識), 這個是非常前瞻的研究, 謝謝 Allian 在這個場合增長了大家見識。

Allian 推薦給大家的 Skills:

- Grill Me: 無情的拷問你直到你很確定你的計畫裡的每一個支線都說清楚了
 - <https://github.com/mattpocock/skills/tree/main/skills/productivity>
- Improve Codebase Architecture: 可以掃描你現有的程式碼找出可以深化的地方, 產出報告後字基於你的選擇進行
 - <https://github.com/mattpocock/skills/tree/main/skills/engineering>

- Tina Lin

這次帶來非常特殊的分享主題，利用 Claude AI 找出每日穿搭。

將衣櫃裡的衣物包含品牌資訊告訴 Claude AI，讓 Claude AI 預先安排一整週該怎麼穿搭，如果有特別的約會也可以特別請 AI 做不一樣的安排。也可以告訴 AI 想要追隨那一個偶像的風格來安排。

底下是 Tina 讓 Claude 產生 Style 規格檔的提示詞，大家也可以用自己的 Claude 來試看看：

我想打造一個個人穿搭建議的每週提醒*scheduled routine*,請你擔任我的個人造型助理。
請在我選定的資料夾裡建立 *style-profile.md*,包含這 9 節:

- 1 穿著者基本資料(含 1.1 每週生活節奏:週一到週末各自的行程性質)
- 2 設計師、品牌風格、常穿的品牌參考
- 3 風格關鍵字
- 4 色彩計畫(基底色 + 亮點色 + 避免什麼)
- 5 版型偏好
- 6 絕對不要的風格
- 7 場合配比(5 個名額,對應星期)
- 8 配件
- 9 天氣調整規則(依溫度分級 + 下雨怎麼換鞋)

先用 6 個問題訪談我,等我回答完再依我的回答撰寫檔案。不要自己編內容。

- Toby

則介紹了他如何用 Claude AI 幫他把他的論文做到更嚴謹同時也守住專業與誠信。

Toby 更進一步介紹如果用 Claude AI 來輔助救災演練的流程規畫。

Toby 推薦給大家的可以幫助學術寫作與研究的 Skills:
<https://github.com/lmbad0202/academic-research-skills>

我們的下一場活動將在 8/28，報名表開放時會再寄給大家，謝謝大家

講者募集中～期待在小聚見到每個愛好 AI 的你

Claude.Formosa

如果您未來不想收到我們的活動通知，您可以用您收信的信箱寄信到：
claude.formosa.hualien+unsubscribe@gigahertz.us
(內容寫什麼都可以，只有 Google 看得到)，系統就會自動將您移除。

(You are receiving this email because you are part of our community. If you prefer not to receive future emails, please refer to the instructions at the bottom of this message.)

Thank you all for coming out to this meetup, and a big thanks to our four speakers for bringing their hands-on experience to the room.

We'd love to meet anyone who enjoys AI and is actually putting it to use in daily life or at work. We're also continuously looking for speakers for coming sessions — whether it's a project you're working on, a pitfall you've run into, or any use case you'd like to talk about, please get in touch.

Below are the summaries from this session's four speakers. We look forward to meeting more new friends next time!

Hauke

Hauke walked us through how he uses AI to build various utility applications, including freemium Google Workspace Tools — among them his Text to Table Converter, which has close to 40,000 downloads.

Beyond the AI side of things, Hauke also shared his experience with the market and marketing aspects of building this kind of web tool business.

Here are the tools Hauke shared with everyone:

- Google Workspace Marketplace: https://workspace.google.com/marketplace/app/text_to_table_converter/388744518554
- About the Text to Table Converter: <https://codoha.com/en/text-to-table/>

If you've been wanting a quick way to build tables in Google Docs, Gmail, and the like, give Hauke's tool a try — and please help him out by leaving a 5-star review.

Allian Kazi

Allian shared a project he's involved with at one of Hualien's major hospitals, using AI to improve SDM (Shared Decision Making — the process where patients and healthcare providers jointly participate in medical decisions and reach consensus). This is highly forward-looking research, and we're grateful to Allian for broadening everyone's horizons.

Skills Allian recommended:

- **Grill Me:** Relentlessly interrogates you until you're certain every branch of your plan has been thought through.
 - <https://github.com/mattpocock/skills/tree/main/skills/productivity>
- **Improve Codebase Architecture:** Scans your existing code to identify areas for deeper improvement, produces a report, then proceeds based on your choices.
 - <https://github.com/mattpocock/skills/tree/main/skills/engineering>

Tina Lin

Tina brought a very distinctive topic: using Claude AI to figure out daily outfits.

By telling Claude about the clothes in her wardrobe — including brand information — she has Claude plan out a whole week of outfits in advance. If there's a special occasion coming up, she can ask for something different for that day, and she can even tell Claude which style icon she'd like to emulate.

Here's the prompt Tina uses to have Claude generate a style profile — feel free to try it with your own Claude:

I want to build a weekly scheduled routine that reminds me of personal outfit suggestions. Please act as my personal styling assistant. Please create a `style-profile.md` in the folder I specify, containing these 9 sections:

1. Wearer's basic profile (including 1.1 Weekly rhythm: the nature of my schedule from Monday through the weekend)
2. Designers, brand aesthetics, and frequently worn brand references
3. Style keywords
4. Color plan (base colors + accent colors + what to avoid)
5. Fit and silhouette preferences
6. Styles to absolutely avoid
7. Occasion ratio (5 slots, corresponding to weekdays)
8. Accessories
9. Weather adjustment rules (tiered by temperature + what shoes to switch to when it rains)

Start by interviewing me with 6 questions. Wait until I've answered before writing the file based on my responses. Do not make up content on your own.

Toby
